MSc Business Administration
IAE Nancy · double degree · 2013 – 2014

TRAINING

Effective Manager Bootcamp
Learngility · Apr 2026

PROFILE

Engineering manager who came up through the code. Nine years building backend and full-stack systems, including a platform serving 50M+ daily players at King, then three years leading up to 9 engineers across two remote teams at Ecologi, a B Corp. I lead with care and high standards, and I love building teams that perform. Still in the technical design and the code reviews, and I use AI and automation to take toil off the team. Co-founded an e-commerce business on the side, so I make trade-offs with the business in view. Available immediately.

EXPERIENCE

Ecologi — B Corp · Remote — Feb 2022 – Jul 2026

Software Engineering Manager → Senior (Feb 2025) — Jun 2023 – Jul 2026

- Managed 9 engineers across two cross-functional squads, grown from a single team of 5, each with a dedicated Product Manager; set priorities with Product and made the technical and business trade-offs.
- Ran the full people cycle: 5 promotions, 2 hires, compensation decisions, a 6-month PIP through to resolution, and zero voluntary attrition in three years. Created a “Product Engineer” career path for a Staff Engineer.
- Led the move to AI-assisted development across technical design, code generation and code review, through AI fireside chats and shared channels rather than a mandate. The team’s feature releases went up 2-3x.
- Built automations that took toil off the team: an n8n incident investigator that pulled Datadog logs and traces, found the likely root cause and drafted a PR; and a weekly delivery digest to Slack, with trends in Notion.
- Tracked features shipped, incidents and PR time-to-close with the team; when review became the bottleneck, added an AI agent that labels every PR Ship, Show or Ask. Retrospectives every two weeks.
- Stayed hands-on: technical design and code review, Terraform in production, CI pipeline improvements, and the Databricks workspace and data pipelines.
- Conceived, pitched and launched Ecologi HackDays, a quarterly hackathon for builder culture, learning and engagement.

Senior Software Engineer — Feb 2022 – Jun 2023

- Designed and built core backend services and data models on the Ecologi Zero platform; took PoCs to live products across TypeScript/Node.js, GraphQL, React, PlanetScale, MongoDB and AWS SQS.

Freelance — Full-Stack Developer — Sep 2020 – Feb 2022 · May 2017 – Jun 2018

- Delivered backend and full-stack systems for international clients in Go, Python, Java/Spring and Node.js; owned architecture, infrastructure and deployment.

King Games — Barcelona, Spain — Jun 2018 – Sep 2020

Full-Stack Developer — Shared Technology — Jul 2019 – Sep 2020

- Shipped features, migrations and production incident fixes on Service Layer, King’s core content and messaging platform serving 50M+ daily active users across all games.

Backend Developer — Internal Applications — Jun 2018 – Jul 2019

- Built the backend of the company-wide Events Management tool, running on Kubernetes with Kafka for messaging; owned the data model, infrastructure and security.

Luffa Shop — Barcelona, Spain — 2018 – 2021

Co-Founder

- Built the e-commerce platform, tracking and operating processes; grew the business to ~€100k annual revenue and 2,200+ orders a year, profitably.

iContainers — Barcelona, Spain — Nov 2015 – May 2017

Full-Stack Developer

- Built production backend services in Go and on AWS Lambda, with PostgreSQL and MongoDB: 3rd-party API integrations (AdWords, CRM, Freshdesk), workflow state transitions and journey analytics.

Early career — Criteo · Sopra Steria — Nov 2014 – Oct 2015

- Technical Solutions Engineer at Criteo, working directly with advertisers on tracking integrations. Previously Java/Spring consultant at Sopra Steria for a utility company.
